

What can I do with NewsTracker?

Non-Users

You can click the "Login as Demo User" button on the right-hand column check out NewsTracker's features with a dummy account, but you already have access to several features. Here are some things you can do instantly, without even creating an account.

Get Headlines

Simply click "Headlines" to browse the latest news of the day featuring all categories.

Search by Keyword

Use the nav-bar to search by keyword to get up-to-date results based off of whatever you're looking for.

Browse by Category

Click the category title of any category on the right to view headlines from each category, or click on the story headline as it slides through to view each story directly.

Users

Through NewsTracker, Registered Users have access to a wide variety of tools that may assist them search for and organize various information.

Detailed Search

Use our Detailed Search feature to further customize your search query by source, date-range, language, and more! You can save this search query to be your default news feed each time you log in.

Sentiment Analysis Tools

NewsTracker uses Python's NLTK Library and Web-Scraping techniques to perform Sentimental Analysis on each article that we receive from our news-api at your request! Polarity and Subjectivity scores may be extracted from each article, or used to filter search results.

Saved Stories

Never lose track of the information you read by using our "Saved Stories" feature to keep all of your most important stories in one place.

Upcoming Features

NewsTracker is an ongoing project that we will continuously be updating in order to give myself and other users ability to access and organize our world's latest trends, insights, and information. Here are some upcoming features from our roadmap.

Amplified User Features

Users will be able to better organize their saved content by being able to categorize them into separate folders named by their choosing, have access to multiple saved search queries, and will be able to write notes for each individual saved story or category.

Integration of Twitter API

Not only will the integration of the Twitter API be useful for those who wish to digest their information in more bite-sized pieces, it will also allow users to receive more precise and recent Sentiment Analysis Data. Automatic, visual representations of such insights should be useful to investors, marketers, etc.
